Title: IT Network Management

1 PURPOSE

This Standard Operating Procedure (SOP) defines the administration process for network devices and resources that manages connectivity for the Netramind secure network.

2 SCOPE

This procedure applies to network and connectivity resources managed by Netramind in support of GxP-regulated activities, including cloud-hosted environments, remote access technologies, firewalls, wireless networks, and related infrastructure components where applicable.

3 REFERENCES

- [SOP-012 IT Change Control](#)

4 DEFINITIONS

- 4.1 Active Directory (AD)—Active Directory (AD) is a Microsoft product that consists of several services that run on Windows Server to manage permissions and access to networked resources. Active Directory stores data as objects. An object is a single element, such as a user, group, application, or device, such as a printer.
- 4.2 Extension Virtual Network Resources—Externally hosted network resources (i.e., Amazon Web Services, Google Cloud, Microsoft Azure, etc.) that are configured and controlled by Netramind Network Administrators as an extension of the Netramind Secure Network.
- 4.3 Incident—An unplanned interruption to an IT service or reduction in the quality of an IT service or a failure of a component item that has not yet impacted an IT service.
- 4.4 Local Accounts—Privileged accounts local to the device, that are used in cases where connectivity to AD is not available.
- 4.5 NETADMIN— Network Administrator
- 4.6 Privileged Accounts—Accounts with elevated rights to key information assets including, but not limited to, operating systems, database server, user directories, network devices and enterprise resource planning application. Privileged users of these accounts include, but are not limited to, system, database, and network administrators, IT Service Desk, and application owners.

5 RESPONSIBILITIES

5.1 Network Administrators (NETADMIN) or Designee

5.1.1 Supporting the Netramind network environment by ensuring that network devices are managed, monitored, and maintained for their intended use.

5.1.2 Configuring and Monitoring extension virtual network resources for use by Netramind personnel.

5.2 Security Subject Matter Expert (SME) or Designee

5.2.1 Reviewing significant security findings where applicable.

5.3 System Owner (SO) or Designee

5.3.1 Reviewing and approving updates to the Netramind network configuration.

5.3.2 Approving network privileged account requests.

5.3.3 Approving all change requests.

5.4 Quality Assurance (QA) or Designee

5.4.1 Approving change requests that affect GxP Computerized Systems.

6 PROCEDURE

6.1 Account Maintenance

Network Resource	Local Privileged Account	Stored in 1Password Vault	Privileged AD Account
On-Premise Firewalls	Yes	Yes	No
On Premise Physical Network Devices (Other)	Yes	Yes	Yes
Extension Virtual Network Resources	Yes	Yes*	Yes*

*Note: Only local privileged accounts are stored in the password vault. Passwords that are linked to a named Netramind Active Directory user account are handled through Active Directory and not stored in 1Password vault.

6.1.1 Authorized NETSADMIN shall login to network resources using the appropriate active directory credentials, whenever possible. For devices that do not support active directory authentication, the local privileged account can be used.

6.1.2 Privileged account passwords are managed according to Netramind security practices.

6.1.3 Local Account credentials are managed in an appropriate cloud application. Local Account credentials are securely managed and periodically reviewed.

6.1.4 Privileged account access is periodically reviewed by appropriate personnel.

6.2 New network resource Deployment

6.2.1 Significant network changes are managed through the applicable change control process.

6.3 Patching and Upgrades

6.3.1 Upgrades to network resources will follow the appropriate change control process and will be performed by NETADMIN as needed.

6.4 Monitoring

6.4.1 Network resources and security-related events may be monitored using appropriate infrastructure and security tools where applicable.

6.5 Documentation

6.5.1 Relevant network documentation is maintained in controlled repositories with appropriate access restrictions.

6.6 Change Management

6.6.1 Changes to network resources will be managed in accordance with IT Change Management (Non-GxP).

Title: IT Network Management

6.6.2 The change control record will identify the appropriate updates to system documentation (i.e., network design diagrams, network routing, device configuration, asset inventory, etc.).

6.7 Incident Management

6.7.1 Network-related incidents are documented and managed through the applicable incident management process.

6.7.2 For events that affect GxP computerized systems, NETADMIN/SO will evaluate each reported incident, consult with QA on the GxP relevance, and document their resolution in a deviation, CAPA, or Change Control if applicable.

6.8 Backup/Recovery

6.8.1 Backup

6.8.1.1 Configuration backups for critical network resources may be maintained where appropriate to support recovery and restoration activities.

6.8.2 Restoration

6.8.2.1 Network configurations may be restored from available backup or configuration management records where applicable.

6.9 Security

6.9.1 Physical Security

6.9.1.1 Physical access to network infrastructure is restricted where applicable.

6.9.2 Logical Security

6.9.2.1 All network resources will require authentication of a privileged account by a NETADMIN for viewing and management.

6.9.3 Network Penetration Testing

6.9.3.1 Security assessments or vulnerability reviews may be performed periodically based on system risk, infrastructure complexity, and business needs.

6.10 Firewall rules management

6.10.1 Firewall and network security configurations are reviewed and updated as appropriate to support secure operations and business requirements.
