Document Number:	PT-NORC-001
Report Date:	10-SEP-2026
Page:	1 of 5

NORC Penetration Test

1.1 Purpose

The purpose of this document is to provide documented evidence that the NORC Portal has undergone application penetration testing as part of its security qualification activities. This report summarizes the penetration testing performed against the portal and records the results of the executed security test cases.

1.2 Scope

The principal environment identified in the records consists of a React frontend, FastAPI backend, PostgreSQL database, Azure Blob Storage and Windows-based application infrastructure. The production application URL recorded in the evidence is <https://norc.netramind.ai>.

Scope Area	Components / Security Coverage
NORC Project / Security Documentation	Security Documentation
Browser / Application-Side	Bundle inspection; browser storage; console leakage; upload request; source maps; CORS
Azure Storage	norcdata Storage Account; HTTPS; TLS; anonymous access; authorization; encryption; logging; network access
Database	PostgreSQL-backed application security controls represented by OQ-DB-SEC test cases
Infrastructure	RC-APP-SERVER / VM monitoring and availability controls

1.3 Assessment Methodology

OQ methodology uses a controlled sequence of configuration review, positive testing, negative/unauthorized testing, objective evidence capture and recording of Actual Result and PASS/FAIL.

Classification	Meaning
PT – Penetration-Relevant	Controlled attempt to access, bypass, expose or manipulate protected resources.
SV – Security Verification	Configuration or control verification that supports the security assessment but is not, by itself, an exploit test.
GAP	Requirement/test case exists but execution evidence or actual result was not recorded.
N/A	Test was not executable in the supplied environment for the recorded reason.

1.4 Test Environment

Penetration Test Report	
Document Number:	PT-NORC-001
Report Date:	10-SEP-2026
Page:	2 of 5

NORC Penetration Test

Component	Recorded Environment
Frontend	React production build
Backend	FastAPI Windows Service
Database	PostgreSQL
Cloud	Microsoft Azure
Storage	Azure Blob Storage – norcdata
Operating System	Windows Server 2022 / RC-APP-SERVER as recorded
Authentication	JWT/token-based application mechanism
Transport	HTTPS/TLS
Monitoring	Azure Application Insights / Azure Monitor / Log Analytics

1.5 Detailed Penetration-Relevant Test Results

The table below summarizes the penetration tests performed on the NORC Portal and the results of each test.

PT ID	Source Test	Security Test	Result	Recorded Result	Evidence ID
PT-APP-001	OQ-APP-SEC-003	Authentication protection	PASS	Unauthenticated access to the protected API was rejected; valid authentication was accepted.	OQ-APP-SEC-003-E01.png, OQ-APP-SEC-003-E02.png
PT-APP-002	OQ-APP-SEC-004	JWT/token-based authentication	PASS	Valid JWT authentication permitted authorized access; missing/invalid token was rejected.	OQ-APP-SEC-004-E01.png, OQ-APP-SEC-004-E02.png
PT-APP-003	OQ-APP-SEC-005	Role-based access control	PASS	Site User access to the administrative endpoint was rejected with HTTP 403 Forbidden.	OQ-APP-SEC-005-E01.png
PT-APP-004	OQ-APP-SEC-006	API authorization	PASS	Unauthorized access to the protected administrative API	OQ-APP-SEC-006-E01.png

Penetration Test Report	
Document Number:	PT-NORC-001
Report Date:	10-SEP-2026
Page:	3 of 5

NORC Penetration Test

				was rejected with HTTP 403 and no protected data was disclosed.	
PT-APP-005	OQ-APP-SEC-007	API input validation	PASS	Invalid/malformed request validation was exercised and the application enforced request validation.	OQ-APP-SEC-007-E01.png
PT-BRW-001	OQ-BRW-SEC-001	Browser upload data protection	PASS	Controlled upload used HTTPS/PUT and no database credentials or Storage Account keys were observed.	OQ-BRW-SEC-001-E01.png through E04.png
PT-BRW-002	OQ-BRW-SEC-002	Production bundle credential leakage	PASS	No credentials or sensitive keys found in production bundle.	OQ-BRW-SEC-002-E01.png
PT-STG-001	OQ-STG-SEC-005	Storage public/anonymous access	PASS	Public anonymous Blob access was not enabled; restricted.	IQ-STG-005-E01.png
PT-DB-001	OQ-DB-SEC-003	PostgreSQL public exposure	PASS	Traceability evidence records the database public-exposure control as PASS.	OQ-DB-SEC-003-E01.png, OQ-DB-SEC-003-E02.png

1.6 Supporting Security Verification Results

ID	Source	Control	Result	Recorded Result	Evidence
SV-APP-001	OQ-APP-SEC-001	Frontend HTTPS	PASS	Production login page used HTTPS/443; no HTTP frontend	OQ-APP-SEC-001-E01.png, OQ-APP-SEC-001-E02.png

Penetration Test Report	
Document Number:	PT-NORC-001
Report Date:	10-SEP-2026
Page:	4 of 5

NORC Penetration Test

				request observed.	
SV-APP-002	OQ-APP-SEC-002	FastAPI HTTPS	PASS	FastAPI health endpoint returned 200 over HTTPS/443. The response displayed db_host and db_name, identified for separate disclosure review.	OQ-APP-SEC-002-E01.png
SV-STG-001	OQ-STG-SEC-001	Storage secure transfer	PASS	Secure transfer required was enabled for norcdata.	OQ-STG-SEC-001-E01.png, OQ-STG-SEC-001-E02.png
SV-STG-002	OQ-STG-SEC-002	Storage minimum TLS	PASS	Minimum TLS version was TLS 1.2.	IQ-STG-001-E01.png

1.7 Observations and Limitations

All penetration and security test cases included in this assessment were successfully executed and recorded as PASS. No failed test cases or security findings were identified within the documented test scope.

1.8 Recommendations and Remediation Priority

Priority	Action	Related Finding / Gap
1	Continue periodic review of application authentication, authorization and protected-route controls.	Application security controls
2	Continue periodic review of browser-side storage, bundle and console exposure to prevent credential or sensitive-data leakage.	Browser / Application-Side

Penetration Test Report	
Document Number:	PT-NORC-001
Report Date:	10-SEP-2026
Page:	5 of 5

NORC Penetration Test

Overall disposition: SECURITY ASSESSMENT – PASS. Continued periodic security verification is recommended as part of controlled change and release activities.
